## EU-25

### Food and Agricultural Import Regulations and Standards - Update

### EU Certification Guide - Update

2005

**Approved by:**

Stan Cohen

U.S. Mission to the EU

**Prepared by:**

Gerda Vandercammen

---

**Report Highlights:**

This guide is intended to provide an overview of legally required health certificates. It also refers to private certification initiatives, which are mostly intended to guarantee quality. The guide is an update of the October 2004 version of the EU Certification Guide. Updated sections are in italics and concern the following products: pets for commercial movements, eggs, pedigree and zootechnical certificates, bovine embryos, colostrum and casings. Furthermore references to outdated certificates for bovine semen, dairy products, casings have been removed.

---

Includes PSD Changes: No  
Includes Trade Matrix: No  
Unscheduled Report  
Brussels USEU [BE2]  
[E3]

*Please be advised that this guide is meant in no way to be taken as exhaustive – neither as concerns breadth of products included nor number of certificates required per product per Member State. Certificates included pertain to harmonized EU requirements, but individual Member States may require certificates that are not covered here. This document is intended for use as a documentation tool and FAS does not assume any liability for its content.*

## Background

European Union (EU) legislation calls for many health and supervisory requirements that are meant to guarantee that imports meet the standards of production in Member States. Unfortunately for exporters, the EU's rules on certification for imports are complicated and are not always harmonized across Member States.

Certification of animals and animal products is harmonized across the EU, in a three-part process. First, the EU must recognize a country as eligible to export a particular animal or animal product. The EU recognizes the U.S. for all animal products. For several products, the EU has approved lists of establishments submitted by U.S. government agencies. Only products processed at these approved establishments may enter the EU. The agencies involved in listing are the Food Safety and Inspection Service (FSIS), the Animal and Plant Health Inspection Service (APHIS), the Agricultural Marketing Service (AMS), and the Food and Drug Administration (FDA). Such establishments may be subject to EU inspections. All EU-approved establishment lists are available on the USEU website (<http://www.useu.be/agri/estab.html>). Finally, animal or public health certificates signed by U.S. officials must accompany all shipments to guarantee that EU requirements are met.

Unlike animal products, certification of plants and plant products is not harmonized in the EU. Phytosanitary certificates, issued by an APHIS inspector, are required to accompany fruit, vegetable, and nut shipments. APHIS issues phytosanitary certificates in accordance with the international regulations set down by the International Plant Protection Convention of the Food and Agriculture Organization of the United Nations ([www.ippc.int/IPP/En/default.htm](http://www.ippc.int/IPP/En/default.htm)). This standard-setting body coordinates cooperation between nations to control plant and plant product pests and to prevent their spread.

In addition to the legally required health certificates, a number of other certificates are used in international trade. These certificates serve mainly as quality guarantees. In the case of organics, it is legally required that shipments be accompanied by certification (to ensure that they meet EU organic standards), but such certificates are issued privately. For more information on authorized certifiers, see [www.useu.be/agri/organic.html](http://www.useu.be/agri/organic.html). Even though there is often no legal requirement for quality certificates, they may be necessary to operate in the market place because of the quality guarantee they offer to operators. For example, in 2001, several large European retailers started EUREPGAP, which harmonized third-party certification of fresh produce. Many retailers have begun requesting EUREPGAP certification for fresh fruit and vegetable suppliers ([www.eurep.org](http://www.eurep.org)).

Certification of processed foods is an even murkier area. Processed foods containing animal product may require certification, but no legislation specifies what percentage of dairy or egg must be present in order to make certification necessary. Products that contain any amount of red meat or poultry meat must be certified, however. Similarly, there are no harmonized certificates for canned products (like vegetables or soups). Member states may, however, require that certificates signed by U.S. officials accompany imports.

Regarding meat and dairy products imported in personal baggage, official veterinary documentation must accompany most products. See <http://www.useu.be/agri/usda.html>.

When certification of a particular product is not harmonized, such rules are controlled by the individual Member State. Hence, the different Member States likely have different certification requirements, and it is best to contact the FAS office in the Member State in question for the most up-to-date requirements. See <http://www.useu.be/agri/FAS-in-EU-25.html> for contact information.

Member States may also apply a waiver to harmonized EU certification requirements in case of commercial samples. In this case the FAS offices in the Member States can also provide the necessary information. Other exceptions concern shipments to free zones and sea vessels. Shipments to U.S. military facilities are also covered by specific rules (SOFA agreements).

Because the EU-25 has twenty official languages, the language that the certificate is written in is important. According to the general principles for veterinary certification (Council Directive 2002/99/EC), certificates must be in the official language or languages of the Member State of destination, as well as of those of the Member State where the border inspection occurs. (Certified translations may be used instead.) A Member State may, however, agree to accept certificates in an official Community language not its own.

## The Guide

To clarify and simplify these varying (and often confusing) rules and conventions, we present this guide to certification for U.S. exports to the EU. It provides an overview of both legally required health certificates and voluntary certificates.

Certificates are grouped by product. Where possible, links are provided to the forms that U.S. agencies issue for health certification purposes. These forms are usually created in accordance with EU legislation, so we have also provided references to the relevant legislation. Please note that if there is no history of trade, U.S. government agencies may not have model certificates for all products.

## Notes for using the Guide

If interested in reading the referenced EU legislation, look it up using EUR-Lex (<http://europa.eu.int/eur-lex/en/index.html>). Click on "Official Journal." Then, search by publication reference in the Official Journal by entering the year of the legislation, which is the first number listed under "OJ Reference" in the guide. For example, "93/197/EC" means "Commission Decision 197 of the year 1993." Next, choose OJ series "L." The OJ number is the number following the "L" in the guide. In some cases, there are two numbers after the "L" – for example, L89/35. "35" denotes the page number.

## U.S. Competent Authorities

The U.S. issuing agencies are identified by their acronyms. Following is a list of these and the relevant websites of each agency for further information.

- AMS:           Agricultural Marketing Service, USDA  
  
                  European Union Health Certification Program  
                  [http://www.ams.usda.gov/dairy/eu\\_prgm.htm](http://www.ams.usda.gov/dairy/eu_prgm.htm)
- APHIS:        Animal and Plant Health Inspection Service, USDA
